DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-20, drawn to a method of increasing resistance in a plant against a pathogen by transforming the plant with a protein having sucrose isomerase activity, transgenic plants comprising nucleic acids including specified sequences encoding said protein.

Applicant is required to elect a DNA sequence and its encoded protein from SEQ ID NO: 1-2, 3-4, 5-6, 7-8, 9-10, 11-12, 13-14, 15-16, 17-18 or 35-36. The common technical feature between the nucleic acid sequences recited in the claims is that they all encode a protein having sucrose isomerase activity. However, such a feature is known in the prior art, therefore, does not constitute a contribution over the prior art. In addition transgenic plants expressing sucrose isomerase are known in the prior art as evidenced by Kunz et al (WO 200227003, Applicant's IDS). Therefore, the nucleotide/polypeptide sequences of the claims are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1638

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(l).
